1. What conditions are necessary for a body to be in static equilibrium? Note that  $\sum \vec{F}$  is the net force on the body and  $\sum \vec{\tau}$  is the net torque on the body.
  - a.  $\sum \vec{F} = 0$
  - b.  $\sum \vec{\tau} = 0$
  - c.  $\sum \vec{F} = 0$  and  $\sum \vec{\tau} = 0$
  - d.  $\sum \vec{F} = 0$  or  $\sum \vec{\tau} = 0$  (but not both)
2. A heavy seesaw is out of balance. A lightweight child sits on the end that is tilted downward, and a heavy child sits on the other side so that the seesaw now balances. If both children then move forward so that they are at half of their original distance from the pivot, what will happen to the seesaw?
  - a. The side the heavy child is sitting on will now tilt downward.
  - b. The side the lightweight child sitting on will once again tilt downward.
  - c. It is impossible to determine without knowing the masses and distances.
  - d. The seesaw will still be balanced.
3. A book weighs 6 N at the surface of the Earth. When held at rest on top of your head, the net force on the book is
  - a. 0 N
  - b. 6 N
  - c. 9.8 N
  - d. -6 N
4. A cantilever is held in static equilibrium by two vertical supports as shown in the figure. The beam is fastened to the supports with screws so that each support could apply an upward or downward force. The centre of gravity (CG) of the beam is to the right of the second support. In which direction must  $\mathbf{F}_1$  and  $\mathbf{F}_2$  point to keep the beam in static equilibrium?

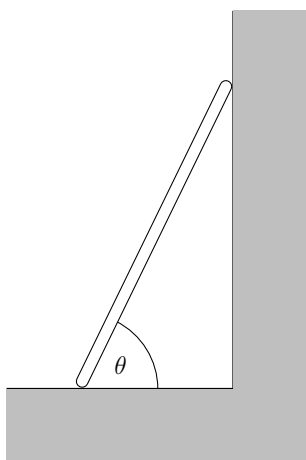

- a.  $\mathbf{F}_1$  and  $\mathbf{F}_2$  both point upward
  - b.  $\mathbf{F}_1$  and  $\mathbf{F}_2$  both point downward
  - c.  $\mathbf{F}_1$  points upward while  $\mathbf{F}_2$  points downward
  - d.  $\mathbf{F}_1$  points downward while  $\mathbf{F}_2$  points upward
5. A person weighing 807 N stands with one foot on each of two bathroom scales. Which statement is correct about this situation?
  - a. Each scale should read 807 N
  - b. None of the other statements are true.
  - c. Each scale should read 403.5 N
  - d. The sum of the two scale readings should be 807 N

6. A heavy child and a lightweight child are balanced on a massless seesaw. If both children move forward so that they are at half of their original distance from the pivot, what will happen to the seesaw?
- The side the lightweight child is sitting on will tilt downward.
  - The seesaw will still be balanced.
  - It is impossible to determine without knowing the masses and distances.
  - The side the heavy child is sitting on will tilt downward.
7. A box of mass 80 kg hangs down from three attached cords secured to the ceiling and wall as shown in the diagram. Find the maximum tension in any one of the three cords.

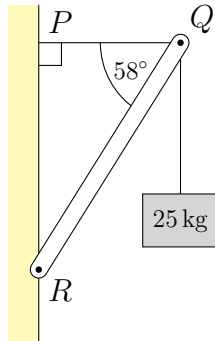

- 1120 N
  - 1370 N
  - 701 N
  - 1260 N
8. A uniform ladder of mass 10 kg and length 5 m leans against a frictionless wall. Let  $\theta$  be the angle that the ladder makes with the ground. If the coefficient of static friction between the ladder and the ground is 0.27, what is the minimum value of  $\theta$  at which the ladder will not slip?

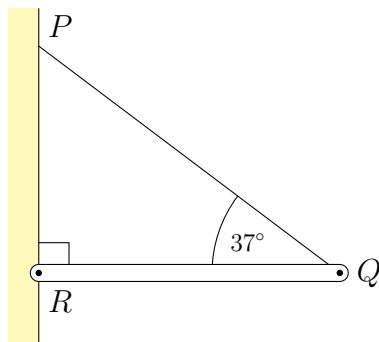

- $62^\circ$
- $58^\circ$
- $56^\circ$
- $37^\circ$

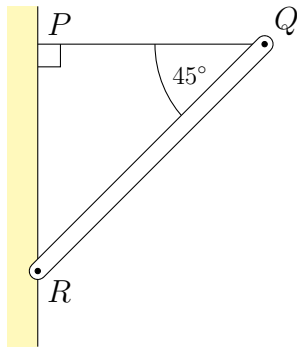

9. A uniform beam QR, 2.0 m long with negligible mass, is mounted by a hinge on a wall and held in position by a horizontal wire PQ as shown in the figure. The beam supports a load of mass 25 kg hanging vertically down from point Q. What is the tension in the horizontal wire PQ?

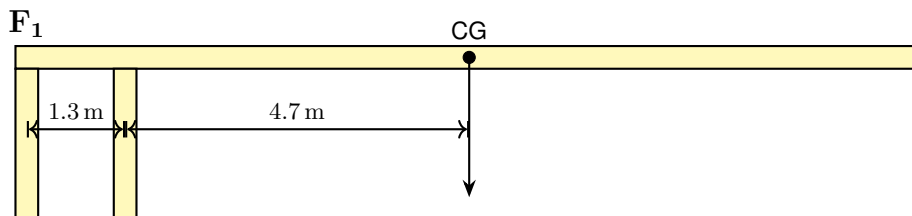

- a. 92 N  
b. 153 N  
c. 30 N  
d. 50 N
10. A 3.0 m long uniform beam of mass 3.0 kg, QR, is mounted by a hinge on a wall and held in a horizontal position by wire PQ, forming a  $37^\circ$  angle at point Q as shown in the figure. What is the magnitude of the tension in wire PQ?

- a. 49 N  
b. 2.4 N  
c. 6.5 N  
d. 24 N
11. A 3.0 m long uniform beam of mass 67 kg (QR) is mounted by a hinge on a wall and held in position by a horizontal wire (PQ), forming a  $45^\circ$  angle at point Q as shown in the figure. What is the tension in the horizontal wire PQ?

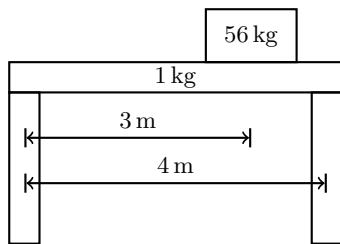

- a. 3280 N
  - b. 32.8 N
  - c. 328 N
  - d. 1890 N
12. Two scales are separated by 8.0 m, and a plank of mass 8.0 kg is placed between them. Each scale is observed to read 4.0 kg. A rock is placed somewhere on the plank, after which the left scale reads 20.0 kg and the right scale reads 60.0 kg. How far from the left scale was the rock placed?
- a. 6.22 m
  - b. 7.12 m
  - c. 6.33 m
  - d. 7.53 m
13. A cantilever beam is held in static equilibrium by two vertical supports separated by 1.3 m. The beam's mass is 56 kg and its centre of gravity (CG) is 4.7 m from the second support. What is the magnitude of the force applied by the first support,  $F_1$ ?

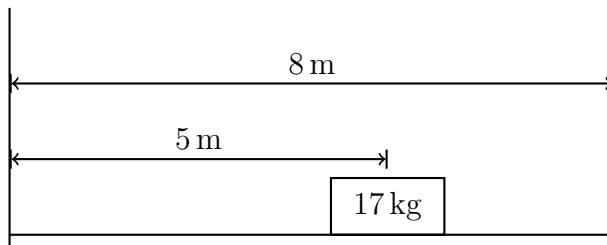

- a. 200 N
  - b. 4000 N
  - c. 2000 N
  - d. 1200 N
14. A uniform 1 kg beam, 4 m long, supports a 56 kg box. The beam is supported by two vertical columns and the centre of gravity of the box is 3 m from the left column. Calculate the force

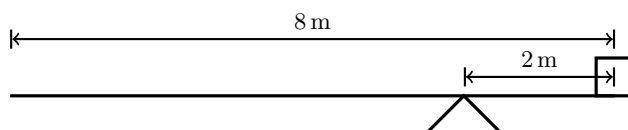

on the right column.

- a. 925 N
  - b. 255 N
  - c. 416 N
  - d. 2290 N
15. An object is kept in static equilibrium by three forces,  $F_1$ ,  $F_2$ , and  $F_3$ . If  $F_1 = 469 \text{ N}$  and  $F_2 = 294 \text{ N}$  are separated by an angle of  $54^\circ$ , what is magnitude of  $F_3$ ?
- a. 684 N
  - b. 701 N
  - c. 978 N
  - d. 648 N
16. A scaffold of negligible mass is hanging horizontally from wires on each end. The scaffold is 8 m long. A 17 kg box sits 5 m from the left end. What is the tension in the left wire?

- a. 12.4 N
  - b. 62.5 N
  - c. 3350 N
  - d. 8210 N
17. A lever is 8 m long. The distance from the fulcrum to the load to be lifted is 2 m. If a worker pushes on the opposite end with 100 N, what is the maximum weight that can be lifted?

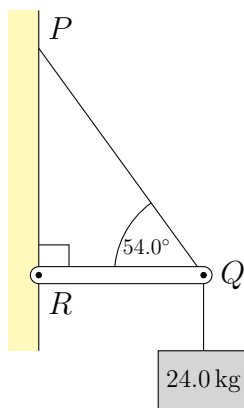

- a. 300 N
- b. 75 N
- c. 33.3 N
- d. 251 N

18. A boy and a girl are balanced on a massless seesaw. The boy's mass is 62 kg and the girl's mass is 42 kg. If the boy is sitting 2.8 m from the pivot, how far from the pivot must the girl be sitting on the other side of the seesaw?

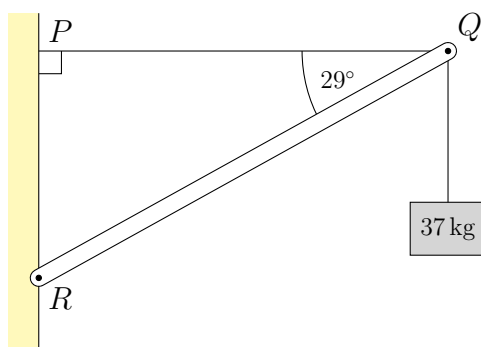

a. 4.1 m  
b. 5.6 m  
c. 5.9 m  
d. 4.6 m

19. A 2.0 m long uniform beam of mass 7.00 kg, QR, is mounted by a hinge on a wall and held in a horizontal position by wire PQ, forming a  $54.0^\circ$  angle at point Q as shown in the figure. A load of mass 24.0 kg hangs vertically down from point Q. What is the magnitude of the tension in wire PQ?

a. 178 N  
b. 33.3 N  
c. 333 N  
d. 666 N

20. A uniform beam QR, 1.0 m long with negligible mass, is mounted by a hinge on a wall and held in position by a horizontal wire PQ as shown in the figure. The beam supports a load of mass 37 kg hanging vertically down from point Q. What is the magnitude of the force on the hinge at point R?

a. 402 N  
b. 2830 N  
c. 748 N  
d. 479 N
